

AP Computer Science A Summer Assignment
Mr. Harrison

Learning your first computer programming language on your own can be daunting, so instead of starting into Java, you can begin to learn the basics of coding in general, like process oriented thinking, loops, and algorithms. Code.org provides a great drag and drop framework for introducing students to coding without having to learn a language, so before starting class in the fall, I want you to go through the Intro to CS course on the Code.org website.

1. Sign up for an account on code.org
2. Scroll to the bottom of the page where it says "Add a Teacher".
3. Use the code PCXQYT to be added to my class
4. You should now see a course at the top of your student page "Accelerated Intro to CS Course". Complete it by the end of the summer.

If you finish this and want to get a head start on the year, feel free to start learning Java on your own at <https://www.codecademy.com/learn/learn-java>
